NestOS Trial — Full Operations Guide

Complete trial pack for HummingBrains: every link, login, role walkthrough, screen-by-screen controls, Chrome Naukri helper, and business value for the firm.

HummingBrains · NestOS
Trial build · July 2026
For Mani & recruiting / sales leadership

> **What NestOS is:** the daily operating system for HummingBrains staffing — Staff Augmentation, Talent Acquisition, and Interview-as-a-Service (IaaS). Recruiters source and track people; managers run interviews and quality; sales owns clients and revenue; admin sees the full firm picture.
>
> **What this trial is:** a live product you can click through and comment on — *not* final handover. Use it → note what to change → then decide next steps.

Contents

1. Trial links
2. Login accounts
3. Access matrix (who sees what)
4. Role-by-role demo process
5. Top bar & global actions
6. Screen-by-screen: every option explained
7. Chrome Naukri helper
8. End-to-end firm loop
9. Business value for HummingBrains
10. Feedback checklist for Mani's team

1. Trial links (send / bookmark these)

The public demo runs through a temporary tunnel on the host PC. Keep that PC awake and NestOS running while the team tests. If the PC sleeps, links stop working.

What	Link
Login	https://presenting-madonna-ability-okay.trycloudflare.com/
App (after login)	https://presenting-madonna-ability-okay.trycloudflare.com/app
This guide (web)	https://presenting-madonna-ability-okay.trycloudflare.com/trial-guide
This guide (PDF)	https://presenting-madonna-ability-okay.trycloudflare.com/downloads/nestos-trial-guide.pdf
Chrome helper install guide	https://presenting-madonna-ability-okay.trycloudflare.com/extension-guide
Download Chrome helper (ZIP)	https://presenting-madonna-ability-okay.trycloudflare.com/downloads/nestos-naukri-helper.zip
Resdex practice page (no Naukri login needed)	https://presenting-madonna-ability-okay.trycloudflare.com/extension-demo

In the Chrome extension popup, NestOS URL must be:
`https://presenting-madonna-ability-okay.trycloudflare.com` (not `localhost` when testing remotely).

2. Login accounts

Role	Represents	Email	Password
Recruiter	Day-to-day sourcing & interviews — **start here**	`recruiter@hummingbrains.com`	`Recruiter@123`
Manager	Delivery / interviewer lead	`manager@hummingbrains.com`	`Manager@123`
Sales	Accounts / growth	`sales@hummingbrains.com`	`Sales@123`
Admin	Founder / ops owner	`admin@hummingbrains.com`	`Admin@123`

Use **Log out** (top right), then sign in as another role to compare menus.

3. Access matrix — who sees what

Screen	Recruiter	Manager	Sales	Admin	Job it does
Home	**Yes**	**Yes**	**Yes**	**Yes**	Today's priorities
Candidates	**Yes**	**Yes**	—	**Yes**	Firm talent database
Find on Naukri	**Yes**	**Yes**	—	**Yes**	Resdex captures → NestOS
Interviews (IaaS)	**Yes**	**Yes**	—	**Yes**	Run / deliver interviews
Log activity	**Yes**	**Yes**	**Yes**	**Yes**	Calls, WhatsApp, email
Messages & tasks	**Yes**	**Yes**	**Yes**	**Yes**	Internal coordination
Analytics	**Own**	**Team**	**Sales lens**	**Full**	Verified activity numbers
Clients	—	**Yes**	**Yes**	**Yes**	CRM & renewals
Leads	—	**Yes**	**Yes**	**Yes**	Website enquiries
Revenue	—	**Yes**	**Yes**	**Yes**	MRR / invoices
Team / Audit	—	**Yes**	—	**Yes**	Utilization & trail
Settings	—	—	—	**Yes**	Users & integrations

4. Role-by-role demo process

A. Recruiter — 15–20 minutes (start here)

Login `recruiter@hummingbrains.com` / `Recruiter@123`

Goal: prove "find people → keep them in NestOS → interview → prove outreach."

1. **Home** — KPIs for interviews needing you, Naukri captures, candidates, tasks. Click any KPI or "Do next".
2. **Candidates**
   - **Add candidate manually** → fill name/role/skills → Save → profile drawer opens.
   - **Upload resume** → drop/click PDF → NestOS parses text fields and adds/updates the person.
   - Open a row → try WhatsApp / Email / Share.
3. **Find on Naukri** (core demo)
   - Download ZIP → unzip → Chrome Load unpacked → folder `nestos-naukri-helper`.
   - Extension popup: NestOS URL = **public trial URL** → sign in as recruiter.
   - Open Resdex practice page → Scan → **Send to NestOS**.
   - Back in NestOS → captures appear → **Save** / **Save all** → Candidates.
4. **Interviews** — open a pending card; walk assign → schedule → capture → report.
5. **Log activity** — log Call / WhatsApp with an outcome note.
6. **Messages & tasks** — message a teammate; check tasks; try **End day** if shown.
7. **My numbers** — pipeline / sourcing / outreach / interviews.

Useful for recruiters: one workspace instead of Naukri + folders + WhatsApp + Excel. Profiles stay with the firm. Outreach is provable.

B. Manager — 10–15 minutes

Login `manager@hummingbrains.com` / `Manager@123`

Goal: prove delivery control — interviews, team visibility, quality trail.

1. **Home** — alerts, pending reports, quick links.
2. **Interviews** — full IaaS board; **New request**; assign interviewer; open capture demo.
3. **Candidates / Find on Naukri** — same tools as recruiters for oversight on mandates.
4. **Team** — who is online / interviewing / on a call.
5. **Audit** — immutable action log (ConnectOS-style verification flavour).
6. **Clients / Leads / Revenue** — see what drives interview volume and retainers.
7. **Analytics** — team scores, IaaS volume, report TAT.
8. Assign a task from Messages (managers can assign).

Useful for managers: SLA and bottlenecks are visible before the client escalates. Less "status only in standup."

C. Sales / Accounts — 10 minutes

Login `sales@hummingbrains.com` / `Sales@123`

Goal: prove growth → delivery handoff without recruiter clutter.

1. **Home** — MRR, renewals soon, open leads.
2. **Leads** — Hot / Warm / Cold enquiries; convert one to a client.
3. **Clients** — health, renewal countdown, churn signal, last contact; open a row.
4. **Revenue** — MRR / ARR / invoice path for billing conversations.
5. **Activity / Messages** — log a client call so renewals aren't only tribal knowledge.

Useful for sales: renewals and concentration risk surface early. Converted leads become recruiter work (mandates / IaaS) without re-typing.

D. Admin — 10 minutes

Login `admin@hummingbrains.com` / `Admin@123`

Goal: see the full firm operating picture + configuration.

1. Walk the full left menu (everything managers + sales see).
2. **Settings** — users/roles, Meet/Teams/Zoom, ATS connector concept, data ownership.
3. Review recruiter **End day / sign-out** extras if pending.
4. Trace the loop: Lead → Client → Mandate/IaaS → Candidates → Placement/Invoice.

Useful for leadership: one picture across Staff Aug, TA, and IaaS — not a spreadsheet per person.

5. Top bar & global actions

Control	What it does	Who uses it
Search	Quick find (candidates / clients / interviews) — trial UI stub for navigation habit	All
Log activity (icon)	Opens log form for a call / outreach without leaving the page	All
Messages (icon)	Quick message flyout → full Messages & tasks	All
Tasks (icon)	Jumps to Messages & tasks board	All
End day	Declare extra work not yet logged (ConnectOS-style). Admin reviews.	Recruiter / Manager (Admin reviews)
Log out	Ends session — switch roles for the trial	All

6. Screen-by-screen — every option & why it matters

Home

Role-specific dashboard. KPIs are shortcuts into real work. Not a marketing collage.
Company value: each person lands on "what to do next," not a blank ATS.

Candidates

- **Tabs** — All / Staff Aug / Talent Acq / IaaS filters (aligns to HB service lines).
- **Upload resume(s)** — PDF preferred; NestOS extracts name, skills, experience when text is readable.
- **Add candidate manually** — create without a file; attach resume later in the drawer.
- **Row click → drawer** — stage, source, CTC/notice, contact, skills, WhatsApp, Email, Verify doc, Share, Push to ATS (demo).
- **Match to open job** — pick a requirement; ranked fits illustrate mandate matching.

Company value: every CV becomes a firm asset — searchable history, not "lost in Downloads."

Find on Naukri

- **Download extension / Install guide** — remote install pack for Mani's team.
- **Refresh now** — pull latest helper captures from NestOS.
- **Folders** — Shortlist / Personal / Viewed / Emailed / All (mirrors Resdex habits).
- **Save / Save all** — promote captures into Candidates.
- **Filter** — keyword / location on the capture queue.

Company value: Naukri has no public API. Recruiters keep searching on Resdex; NestOS becomes the system of record. Fewer duplicate CV views, faster handoff to interviews.

Interviews (IaaS)

- **Kanban** — New → Assigned → Scheduled → Needs notes → Delivered.
- **New request** — client asks HB to interview on their behalf.
- **Card actions** — Assign, Schedule (Meet/Teams/Zoom style link), Start/Continue capture, AI-assisted report, deliver to client.

Company value: scales Interview-as-a-Service without 45–60 min manual write-ups. Report TAT becomes a sales proof point.

Log activity

- Buttons: Call / WhatsApp / Email / LinkedIn.
- Filters by type; incomplete logs stay flagged.
- Recruiters see their own trail; managers/admins see team.

Company value: ConnectOS discipline — if it isn't logged, it doesn't count in analytics.

Messages & tasks

Directory chat, attach/share resumes into threads, task list with due date & priority. Managers/admins can assign tasks; recruiters complete theirs.
Company value: stops "find that CV in WhatsApp from Tuesday."

Analytics

Tabs for Pipeline, Sourcing, Outreach, Interviews / IaaS, plus Team & Leads for leadership. Built on verified activity, not verbal estimates.
Company value: same window language as ConnectOS — one place for performance conversations.

Clients

Services, MRR/fees, renewal countdown, health, churn flags, owner, last contact; click for detail.
Company value: renewals don't slip unnoticed; MRR concentration risk is visible.

Leads

Website / referral enquiries. Hot / Warm / Cold. Convert → Client. Sales owns this; recruiters receive work after conversion.
Company value: inbound interest becomes pipeline with clear ownership.

Revenue

MRR / ARR / project / placement views and invoice workflow for trial billing discussions.
Company value: finance and delivery share one narrative — not separate trackers.

Team & Audit

Live people status; immutable action trail. Supports utilisation talks without micromanagement theatre.

Settings (Admin only)

Users & roles, video providers, ATS connector status, data retention / export posture (no lock-in).

7. Chrome Naukri helper — checklist

1. Download ZIP: `/downloads/nestos-naukri-helper.zip`
2. Unzip — folder must contain `manifest.json`
3. Chrome → `chrome://extensions` → Developer mode ON → **Load unpacked**
4. Select `nestos-naukri-helper`
5. Popup → NestOS URL = public trial base → recruiter login
6. Practice on `/extension-demo`, then real Naukri Resdex
7. If you see **"Sign in via the NestOS helper popup first"** — open the extension icon and sign in (the page panel cannot log you in by itself)

8. End-to-end firm loop (what "good" looks like)

1. Website enquiry lands in **Leads** (Sales).
2. Sales converts → **Client** with service line (Staff Aug / TA / IaaS).
3. Mandate or interview request appears for recruiting.
4. Recruiter sources on Naukri → helper → **Find on Naukri** → **Candidates**.
5. Outreach logged; shortlist shared in Messages.
6. IaaS interview run → report delivered; or TA/Staff Aug stage moves forward.
7. Invoice / retainer visible under **Revenue**; renewals watched on **Clients**.

9. Business outcomes NestOS is aiming at

- **Faster placements** — shortlists and history live in one hub.
- **Lower Resdex waste** — firm-owned profiles after first capture; less re-viewing the same CV.
- **Scalable IaaS** — structured capture + fast reports protect margins on interview volume.
- **Account protection** — renewal and churn signals before revenue walks out.
- **Manager visibility** — verified activity instead of verbal stand-ups only.
- **Cleaner growth loop** — website lead → sales → client → recruiter delivery.
- **Recruiter sanity** — less tab-switching; work counts when logged.

10. Feedback checklist for Mani & team

Please try

- Recruiter path: manual add + PDF upload + Naukri helper + Save
- One IaaS card through to report
- Sales: lead → client + open a renewal alert
- Manager: assign interview + glance Team/Audit

Please tell us

- Field names / stages you actually use
- Which Naukri folders matter most
- Who must approve interviews / invoices
- Must-have ATS (Greenhouse, Workday, Zoho…)
- Anything confusing or missing for real HB workflow
